

Introduction

This project is a modern e-commerce website for a vinyl record store, designed to provide a curated and responsive browsing experience for users. The site includes key features such as a dynamic product grid, search functionality, wishlist management, and a multi-step cart/checkout system. Built using modular JavaScript, SCSS, and Bootstrap 5, the frontend prioritizes reusable components and clean structure in preparation for an imminent backend transition using Node.js and Express. The design reflects a focus on usability, discoverability, and future integration with a live product database.

Technologies

Frontend - HTML5, CSS (Bootstrap), JavaScript, jQuery

Backend - Node.js, MySQL database, Express
